                                                                                                                                                                                                                                This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagh haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagA haemagglutinin protein. T polypeptides are used to produce antibodies to organisms associated wi periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 SSASYINFEGPONPDNYLVTPELSLPNGGTLTFWVCAQDANYASEHYAVYASSTGNDASN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P. gingivalis 381 haemagglutinin hagA (AAR96030) was identified as the product of the hagA gene (AAT30654) isolated as an BCORV fragment of genomic DNA. The haemagglutinin, or portions of it (see also AAR96021-24), can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise os field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09

It forms part of haemaggluthin hagA (see also AAR96030). HARPP1 and other hagA repeat unit products (see also AAR96022-24) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows produ. of live vaccine. HARPP1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                               HAREP4 (AAR96024) is the product of the HAREP4 repeat unit (AAJ30648) of the hagA gene (AAT30654) of P. gingivalis 318. It forms part of haemagglutinin hagA (see also AAR96030). HAREP4 and other hagA repeat unit products (see also AAR96011-23) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against cells and used as vaccines to protect humans or animals against beriodontal disease. Expression in Salmonella cells allows prodn. of live vaccine. HAREP1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

                                                                                                                                                                                                                                                                                                                                                                                                            P. gingivalis 381 haemagglutinin hagE (AAR96033) was identified as the product of a gene (AAT30656) identified in P. gingivalis 318 genomic DNA The haemagglutinin can be obtd. from transformed host cells and used as vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. appln. (Updated on 16-OCT-2003 to standardise OS field)

AG (AG-2) were isolated from P. gingivalis strains H66 (ATCC 33277) and W50 (ATCC 53973). The sequences of the proteins were used to design PCR primers and probes to isolate AG DNA. Lambda DASH and lambda ZAP libraries were screened with a probe based on amino acids 11-22 of the AG protein to obtain DNA encoding AG-1 (AAQB3484) and AG-2 (AAQB3489). AG-2 correct PN field.)

This sequence represents the hagE haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            301
                                             This sequence represents a Porphyromonas gingivalis arginine-specific proteinase known as Arg-gingipain/gingipain-2 amino acid sequence. Gingipain-2 consists or a 50kD protease component non-covalently associated with a 44kD haemagglutinin component. The proteinase is stimulated by glycine containing peptides and glycine analogues. It is trimibited by cysteine protease group specific inhibitors. The protease preparation can be used in immunogenic compositions and vaccines against inflammatory response and tissue damage caused by P. gingivalis in periodontal disease. It can also be used to screen for agents that modulate Arg-gingipain proteinase activity inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         62

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

lysine-specific cysteine proteinase porphypain (EC 3.4.22.-) - Porphyromonas gingivalis lysine-specific cysteine proteinase 1, 60K

Nylternate names: lysine-specific cysteine proteinase 1, 60K
C;Species: Porphyromonas gingivalis
C;Species: Porphyromonas gingivalis
C;Date: 22-Oct-1999 #sequence revision 22-Oct-1999 #text_change 17-Nov-2000
C;Accession: 170836; T30837; T30826; A53113
R;Barkcoy-Gallagher, G.A.2741, 1996
A;Ritle: Analysis of the prtP gene encoding porphypain, a cysteine proteinase of Porphy.
A;Reference number: 220895; MUID:96213011; PMID:8631659

J. Biol. Chem. 267:18896-18901(1992).

-I. FUNCTION: Thiol protease which is believed to participate in intracellular degradation and turnover of proteins. Its proteolytic activity is a major factor in both periodontal tissue destruction and in bacterial host defense mechanisms. Activates complement C3 and C5.

-I. CATALYTIC ACTIVITY: Cleavage of proteins, including collagens and immunoglobulins, with a preference for Arg in P1, and hydrophobic residues in P2 and P3.

-I. ENZYME REGULATION: Requires cysteine for activation and Ca(2+) and/or Mg(2+) for stabilization. It is stimulated by glycine-containing dipeptides. It is resistant to inhibition by proteinase inhibitors in human plasma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. -!- CATALYTIC ACTIVITY: Hydrolyzes the link between N-acetylmuramoyl residues and L-amino acid residues in certain bacterial cell-wall glycopeptides.
-!- CATALYTIC ACTIVITY: Endohydrolysis of the di-N-acetylchitobiosyl unit in high-mannose glycopeptides and glycoproteins containing the -[Man (GloNac) 2] Asn-structure. One N-acetyl-D-glucosamine residue remains attached to the protein; the rest of the oligosaccharide is released intact.
-!- TYM: NUDERGOSE PROTEOLYTIC PROCESSING TO GENERATE THE TWO EVENTALED IN AUGUST AND ENGEDATICE.
                                                                                                                                                                                                                                                     01-0CT-1996 (Rel. 34, Last sequence update)
01-0CT-1996 (Rel. 34, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Bifunctional autolysin precursor [Includes: N-acetylmuramoyl-L-alanine amidase (EC 3.5.1.28); Mannosyl-glycoprotein endo-beta-N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EXTRACELLULAR LYTTC ENZYMES.
SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE N-ACETYLMURAMOYL-L-ALANINE AMIDASE FAMILY 2.
SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO FAMILY 73 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "A Staphylococcus aureus autolysin that has an N-acetylmuramoyl-L-alanine antidase domain and an endo-beta.N-acetylglucosaminidase domain: cloning, sequence analysis, and characterization."; Proc. Natl. Acad. Sci. U.S.A. 92:285-289 (1995)

Biol. Reprod. 53:285-294(1995).

-!- FUNCTION: Binds to oocyte zona pellucida in vivo. May play a rol in the fertilization process and/or early embryonic development.
-!- SUBCELLUIAR LOCATION: Secretory granules.
-!- TISSUE SPECIFICITY: Epithelial cells of the oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Molecular cloning and characterization of a mouse oviduct-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

R. Cerecochemical course of hydrolysis catalysed by Cellulomonas fimi

R. Cens, a member of a new family of beta-1,4-glucanases.";

R. Sichen. Biochbys. Res. Commun. 199:1223-1228(1994).

C. -! FUNCTION: Hydrolyze cellohexaose to amixture of cellotetraose, and

cellotriose and cellobiose, with only a trace of glucose. It

hydrolyzed cellopiose, with only a trace of glucose. It

cellotetraose to cellobiose, unit id did not hydrolyze cellotriose.

CC cellotetraose to cellobiose, but it did not hydrolyze cellotriose.

CC Has also weak endoglucanase activity. Hydrolyzes glucosidic bonds

CC with inversion of anomeric configuration.

CC -!- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages

in cellulose and cellotetraose, releasing cellobiose from the non-

CC -!- SIMILARITY: Contains 3 fibronectin type III domains.

CC -!- SIMILARITY: Contains 1 bacterial-type cellulose-binding (CBD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright.
